Advantages' of using the Improved Rocket Energy Saving stoves:

- ✓ **1 Saves money:** A baker who previously used 600,000/= worth of firewood with the traditional 3 stand fire stove can now use only 180,000/= with the rocket stove per week.
- ✓ **2 Time saving:** Heat concentration on saucepan makes it faster to cook.
- ✓ **3 less smoke:** Because of their design, the rocket stoves generally produce very little smoke.
- ✓ **4 Safe and Easy:** To use: once lit rocket stoves fire will not unless the user stops feeding charcoal to the fire, There is also no need to blow at the flame to keep the fire burning.
- ✓ **5 Good heat distributions:** The rocket stove evenly distributes heat around the baking chamber thereby producing better quality products.
- ✓ **6 Environmentally friendly:** The rockets use less charcoal and therefore contribute to a reduction in the rate of deforestation. They offer less pollution to the environment because of their almost smokeless operation.

The fixed inbuilt types are finished with either selected bricks or tiles

The fitting stainless steel saucepans are of the thickness 3mm bottom and 2mm sides

The movable stove outer body is stainless metallic 2mm
